Telephone:  
Address: Sanine Clinic & Maternity, N.39A, St.169  
E-mail

Patient: LONG SOKLY  
Age: 62  
Sex: Female  
City/Province: ---NA---  
Other Info:

### HISTOPATHOLOGICAL REPORT

#### Clinical Information:

Right breast mass (BIRADs 4b) at right upper quadrant => Microbiopsy under echoguide

#### Macroscopy:

There are two small of micro biopsy from the mass.

#### Histology/Cytology:

The pieces of biopsy are composed of neoplastic cells that are disposed of mostly in irregular small sheets, clusters, cords, and no glandular formation, infiltrating in a fibro-inflammatory stromal background. The neoplastic epithelial cells are relatively pleomorphic. The cells' appearances are medium or large with a moderately hyperchromatic regular nucleus, nucleolus, and high nucleo-to-cytoplasmic ratio. A few mitoses are noted. The stroma is usually infiltrated by many lymphocytes.

#### Conclusion:

Invasive ductal carcinoma, G2 (IDC, G2, NST)

#### Comment:

Date Issue: 03/05/2022
