Physician: Dr. CHEA CHANDY
Telephone:
Address: Sanine Clinic & Maternity, N.39A, St.169
E-mail

Patient: HUOT ENG
Age: 68
Sex: Male
City/Province: ---NA---
Other Info:

HISTOPATHOLOGICAL REPORT

Clinical Information:

Large hepatic mass + numerous satellite nodules. Clinically in favor of cholangiocarcinoma.
Micro-biopsy under echoguide.

Macroscopy:

There are three small pieces from the micro-biopsy.

Histology/Cytology:

The pieces of micro-biopsy from liver parenchyma present infiltration of a relatively ill-defined glandular structure composed of atypical cells. The glandular (ductal or tubular) structures are lined by cuboidal or low columnar cells that contain a moderate amount of pale, sometimes granular cytoplasm with vesicular nuclei and less prominent nucleoli. The mitosis is minimal. The stroma is commonly fibrosis.

Conclusion:

Invasive cholangiocarcinoma, moderately differentiated
